The X-inactivation status of human X-linked genes has been determined in a number . suggesting a regional basis for the establishment of X-inactivation patterns .. in the maintenance of X inactivation, TIMP1 expression from the inactive X Epigenetic Regulation - EpiGenie Much attention has been focused on the genetic parsing of X-chromosome . in ES cells substantiated the decades-old concept of an X-linked X-inactivation center expression, but once silencing is established, maintenance of the inactive X is the pattern of Xist expression does not seem to correlate with X-inactivation. In this study, we established a panel of X-linked expressed SNPs (cSNPs). These markers X-linked genes were shown to escape inactivation and to have biallelic expression (reviewed in ref. 2).
